Professional Summary

- Full Stack Software Engineer with experience building scalable web applications, backend services, and enterprise integrations across distributed environments.
- Skilled in C#, .NET, JavaScript, TypeScript, Vue.js, PostgreSQL, and Azure DevOps, with hands-on experience delivering solutions in cloud-based and production-support contexts.
- Proven impact in improving application performance through query optimization, latency reduction, and observability using tools such as Grafana and Elastic APM.
- Experienced in authentication and integration scenarios including SSO with Active Directory and Identity Server (WSO2), as well as GIS-related workflows and Python-based geoprocessing tasks.

Technologies & Tools

Languages: TypeScript, C#, Python, PHP

Frameworks & Runtimes: .NET, Node.js, Vue.js, Next.js, Laravel

Databases: MongoDB, PostgreSQL, Redis

Cloud & DevOps: AWS (ECS, S3, ECR), Azure (Application Insights, Azure Pipelines), Docker, Kubernetes, Terraform, CI/CD

AI/LLM: OpenAI, Anthropic

Messaging & Infra: RabbitMQ, WebSockets, SSE, Sentry, Elastic APM, Grafana

Professional Experience

Mid-Level Software Engineer, Agrottools - São José dos Campos, São Paulo, Brazil (Remote) June 2021 – Present

- Improved application performance by optimizing queries and reducing latency, while supporting GIS-related workflows and Python-based geoprocessing tasks.
- Developed and maintained full-stack web applications using C#, .NET, JavaScript, TypeScript, Vue.js, HTML, and CSS, following testing practices and SOLID principles.
- Built and maintained backend services and background processing workflows using Azure DevOps, Azure Pipelines, RabbitMQ, .NET hosted services, Hangfire, Service Bus, Redis, MongoDB, and PostgreSQL.
- Enhanced observability and reliability with Grafana, Elastic APM, and ephemeral environments, while implementing authentication and enterprise integrations such as SSO with Active Directory and Identity Server (WSO2).

Freelance Software Engineer, São Paulo, Brazil (Remote)

June 2025 – August 2025

- Modernized and migrated a legacy system into a web-based solution.
- Developed the application using .NET with Razor, adapting the existing business logic to a web environment.
- Used Docker to provision the database and certificates, improving environment consistency and deployment reliability.

Software Developer (volunteering), Community He4rt Developers - Brazil (Remote)

2019 – Present

- Contributed to open-source JavaScript/TypeScript and PHP/Laravel projects, closing issues, reviewing code, and merging pull requests across community libraries.
- Actively participated in a collaborative learning environment, where we shared knowledge and supported people entering the tech field by helping them grow through free learning and mentorship.

Education

Bachelor of System Information, Estácio de Sá – Teresina, Brazil

Feb 2020 – Jun 2024

Projects

Redis Manager

- A desktop application built with Rust Tauri, Vue 3, and TypeScript, backed by a .NET C# API. It provides a user-friendly interface to connect to Redis instances, browse and manage keys, view values in JSON format, edit existing entries, and create new keys.

Github Org Discovery

- A pipeline that extracts data from GitHub organizations and builds a knowledge graph in Neo4j, enabling exploration of relationships between developers, repositories, teams, and technologies through Cypher queries.

Languages

English: Upper-Intermediate (B2) | Portuguese: Native (C2)
